Bexley goes electric

26 new charging points will be installed throughout the Borough by the end of the autumn in an initiative led by the Council to provide a service to people using electric vehicles.

The 26 new charging points will be installed close to amenities in 13 areas and are located in parking bays that were previously underused.

A survey carried out earlier this year indicated that local people are interested in making the switch to electric vehicles, but that their greatest concern is the availability of charging points.

Cllr Peter Craske, Bexley's Cabinet Member for Places said:

"We're investing in Bexley's electric vehicle charging infrastructure because we know that this is key to making residents feel confident about switching to cleaner, greener electric vehicles. Making the switch will help to reduce harmful emissions and ultimately improve the quality of our air."

The locations of the new electric vehicle charging points are as follows:

- Welling - Bellegrove Road, Danson Lane, Sherwood Park Avenue, St.John's Road
- Blackfen - Blackfen Parade
- Erith - Walnut Tree Road, Erith Road
- Bexleyheath - Methuen Road, Sandford Road
- Belvedere - Nuxley Road, Picardy Street
- Sidcup - The Oval
- Crayford - Waterside

Encouraging residents to use electric vehicles is good for the environment and means cleaner air, which is good for all of us. Increasing the availability of charging points is the first step in a range of initiatives by the Council to enable local people to make the switch.
